## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election with traverse of Group II in Paper No. 5 is acknowledged. The traversal is on the ground(s) that the field of search for the group I and II inventions are co-extensive. This is not found persuasive since the class 257 and its subclasses disclose only structures of semiconductor devices. Therefore, the search for Group II, method, does not necessary go beyond class 438 and its subclasses. Hence, the search of the Group II and I are not necessary co-extensive.

The requirement is still deemed proper and is therefore made FINAL.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 1, 4-5 and are rejected under 35 U.S.C. 102(e) as being anticipated by Blish et al., US 6,362,524, hereinafter, Blish.

In regard to claims 1, 5, in fig. 12, Blish discloses a method of fabricating an integrated circuit seal ring, see the title and col. 5, lines 28-31, comprising:

providing an active area 144 including semiconductor device structures; and forming a continuous conductive loop around the perimeter of the integrated circuit whereby the conductive loops has a plurality sections having at least two different alternating widths, wherein the loop form the seal ring, see fig. 12 and col. 4, lines 42-60.

In regard to claims 4 and 8, the impedance of each of the different alternating sections since the have different surface area, see fig.12.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2-3 and 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blish et al, the above reference.

In regard to claims 2-3 and 7-8, Blish discloses all of the claimed limitations as mentioned above, but Blish does not expressly disclose the thickness of the conductive loops.

At the time of the invention was made, it would have been obvious to a person of ordinary skill in the art to modify the thickness as taught by Blish because applicant has not disclosed that these thicknesses provide an advantage, is used for a particular purpose, or solve a stated problem. One of ordinary skill in the art, furthermore, would

Art Unit: 2814

have expected applicant's invention to perform equally well with either thickness because they perform the same function of conductive loops and seal ring.

Therefore, it would have been obvious to one of ordinary skill in the art to modify Blish to obtain the invention as specified in claims 2-3 and 7-8.

Indeed, it has been held that mere dimensional limitations are *prima facie* obvious absent a disclosure that the limitations are for a particular unobvious purpose, produce an unexpected result, or are otherwise critical. See, for example, *In re Rose*, 220 F.2d 459, 105 USPQ 237 (CCPA 1955); *In re Rinehart*, 531 F.2d 1048, 189 USPQ 143 (CCPA 1976); *Gardner v. TEC Systems, Inc.*, 725 F.2d 1338, 220 USPQ 777 (Fed. Cir. 1984), cert. denied, 469 U.S. 830, 225 USPQ 232 (1984); *In re Dailey*, 357 F.2d 669, 149 USPQ 47 (CCPA 1966).
